Offensive Security Testing

VSOC

Proactive Monitoring Threat Center
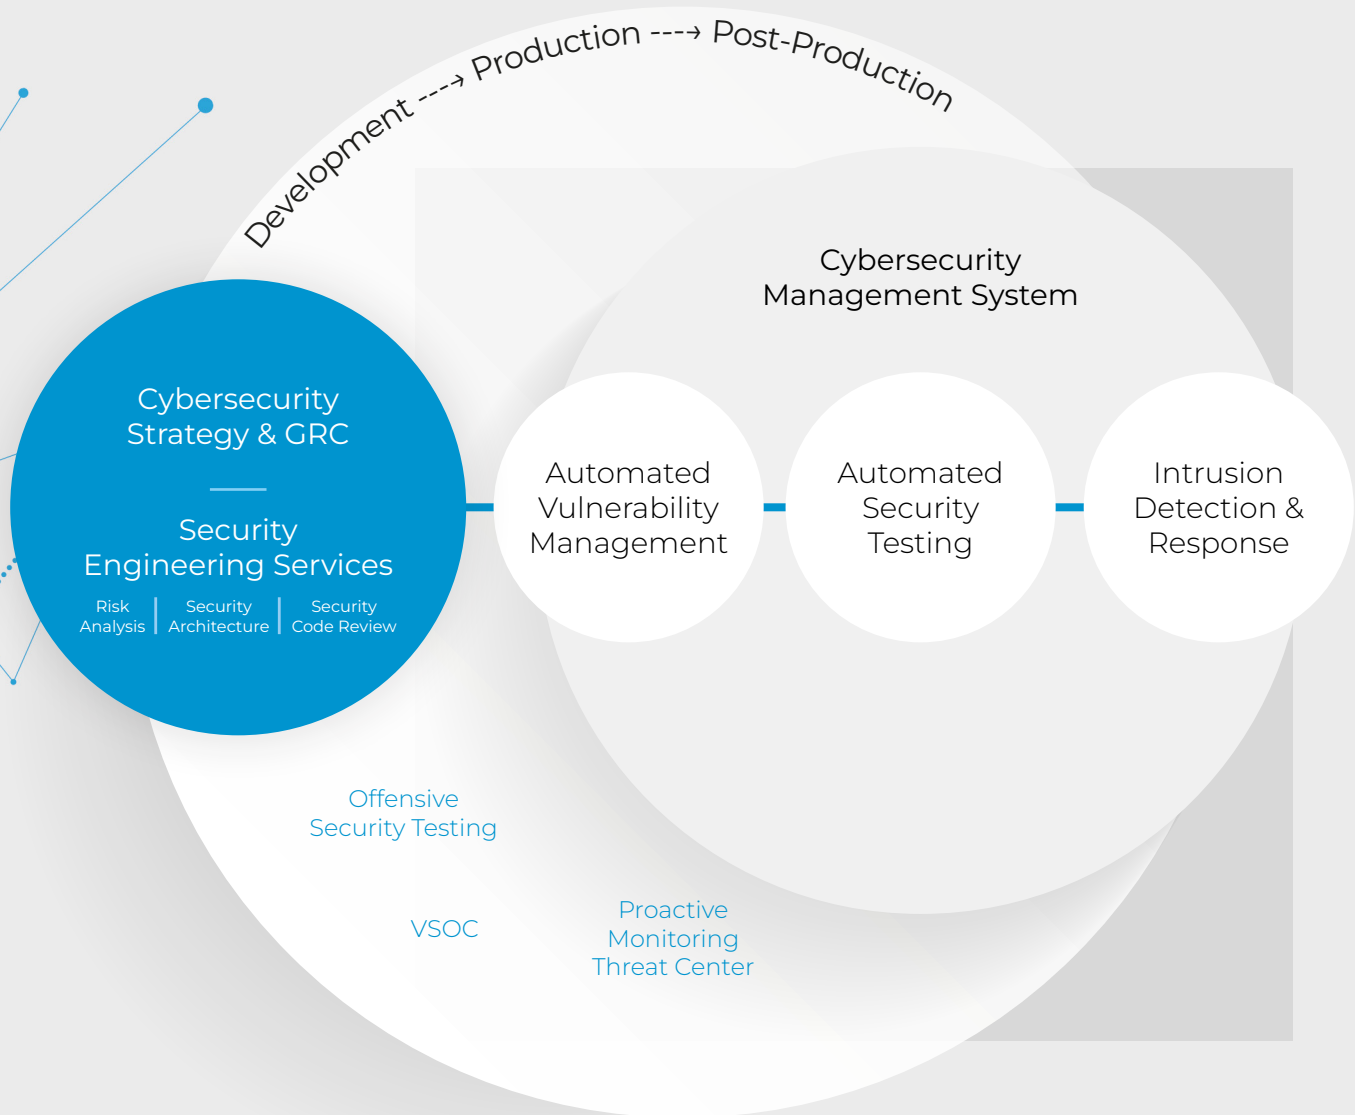

Since 2016, CYMOTIVE has been working closely with leading OEMs and Tier 1 suppliers, designing, developing and integrating cybersecurity products and services for every lifecycle stage of vehicles and fleets.

By combining automated products in regulatory compliance management, vulnerability management, security testing and intrusion detection and response with customized services, our customers solve the complex challenges of compliance with end-to-end cyber protection.

With our deep knowledge of the vast complexities of hundreds of components per vehicle type, our expert services offer strategic planning, risk analysis, architectural design, security code review, security controls testing, penetration testing, VSOC, threat and incident detection and response, and managed services.

The CYMOTIVE Advantage in
Secure Smart Mobility

Proven Technology

Integrated and on the road in millions of vehicles.

—

End-to-End

Offering a full lifecycle platform providing cyber security from development to post-production.

—

The Purple Approach

Unique offensive–defensive cyber expertise under one roof.

—

Customized

Our solutions are thoroughly tailored to meet your business needs.

—

Reduced Costs

CYMOTIVE's solutions enable customers to reduce costs by mitigating potential threats early in the lifecycle stage.

—

Compliance

We enable compliance with regulations and automotive standards such as UNECE, GBT, ASPICE, AutoSAR, ISO 9001, ISO 90003, and more.

—

Working from Within the OEM

Since 2016, CYMOTIVE is the trusted security partner of the Volkswagen Group.

—

History of Success

Founded by leaders of Israel's National Security Services.

CYMOTIVE Technologies

—

Founded in 2016, CYMOTIVE Technologies offers a superior combination of expertise and experience to deliver comprehensive end-to- end security solutions, protecting the smart mobility ecosystem in an era of accelerated cyber threats on an expanding attack surface.

CYMOTIVE's customers of automobile manufacturers and their tier-1 suppliers benefit from continuous cybersecurity covering the full lifecycle of vehicles and fleets - from development to postproduction. Currently, the company employs close to 200 security experts at locations in Israel, Germany, Sweden and the U.S.
